## **COMPANY FACT SHEET**

### **Overview**

TeleNav, Inc., headquartered in Sunnyvale, California, was the first company to launch a GPS navigation system on mobile phones in the United States. TeleNav is a global leader in wireless location-based services (LBS), including GPS navigation, Mobile Resource Management (MRM), asset GPS tracking (AVL) and local search. The company's flagship product, TeleNav GPS Navigator™, is comparable to in-car systems found in luxury vehicles, but offers a superior experience with functionality such as automatically updated maps and business locations, full color 3D moving maps, traffic alerts and one-click rerouting, speech recognition, Wi-Fi hotspot finder, lowest price fuel finder and more.

TeleNav offers its services internationally through leading wireless carriers including Sprint Nextel, AT&T, T-Mobile USA, Alltel, Boost Mobile, Qwest, SouthernLINC Wireless, Rogers, China Mobile and Vivo Brazil. TeleNav is also available in 15 countries in Europe. TeleNav partners include Research In Motion (RIM), Motorola, Samsung, Sanyo, LG, Palm, HTC, Hewlett Packard, Nokia, NAVTEQ, Tele Atlas, deCarta, Qualcomm and SiRF Technology Holdings.

### **TeleNav Products**

#### **TeleNav GPS Navigator™**

TeleNav's flagship product, TeleNav GPS Navigator, is a portable version of the GPS systems found in luxury vehicles, but it works instead on mobile phones and PDAs. TeleNav GPS Navigator surpasses in-car and stand-alone GPS systems with features including traffic alerts and one-click rerouting, location sharing, millions of additional business listings, voice-activated directions, and free updates to maps and points of interest—all at a fraction of the price.

TeleNav GPS Navigator is a great business tool as well. Companies can save time, money and frustration by arming their employees with the tools when on the road.

#### **TeleNav Track™**

For managing a mobile workforce, TeleNav Track is the first mobile phone-based tracking service with integrated voice and on-screen GPS navigation, electronic time-sheet reporting and interactive dispatching. No matter how big or how small the enterprise, TeleNav Track increases productivity, reduces operational costs and improves customer service.
